FMBA AI Workshop 5

Prototyping with AI

Dr. Yuan Tian

How to do Vibe Coding ?

- Have a idea about what you want to build or pain point that you aim to address.
- Have sufficient domain knowledge and vocabulary to describe your needs and features to AI tools
- Keep modifying using **prompts in Agent Mode** until you satisfied with app.

Never read the code yourself! If you do, then you are not doing vibe coding, you are doing conventional programming.

- **Use Agent Mode for Vibe Coding**

Vibe Coding: Github Copilot and Github Copilot Chat

- 
- **A paid service provided by Github (10 USD per month)**
 - Students can get it for free.
 - **Your AI pair programmer**
 - Suggest code and entire functions in real-time, right from your editor (supporting Visual Studio Code and Jupyter Notebook)
 - **VS Code + Github account + Copilot**
 - Install copilot extension in VS code
 - Login your Github account to enable copilot.

Lab: Build a interactive Dashboard with Streamlit

Download the following files from the `downloads` folder in the <https://github.com/tianyuan09/fmbaaiworkshop26spring>.

- `Compute Financial Ratios Notebook.ipynb` – a Jupyter Notebook
- `sp500_data.csv` – Financial data.
- `sp500_tickers.csv` – List of tickers.

Drag these files into your **Github Codespaces**.

Reading the following sections:

- **4.1 Context and Goal**
- **4.2 The Vibe Coding Setup**

Lab: Build a interactive Dashboard with Streamlit

Download the following files from the `downloads` folder in the <https://github.com/tianyuan09/fmbaaiworkshop26spring>.

- `Compute Financial Ratios Notebook.ipynb` – a Jupyter Notebook
- `sp500_data.csv` – Financial data.
- `sp500_tickers.csv` – List of tickers.

Complete the following sections:

- **4.3 Lab: Make it a `.py` file with functions** (**hint: vibe coding**)
- **4.4 Learn a bit about Streamlit** (a python package for building dashboard web application)

Learning Streamlit (40 minutes)

Must-to-dos:

1. Create multiple [app1.py](#), [app2.py](#), [app3.py](#), [appx.py](#) script files to experiment with features offered in streamlit using the sample code offered in the API.
2. Be sure to test and understand the following features.
 - a. `st.title`
 - b. `st.write`
 - c. Sidebar
 - d. Buttons
 - e. `Sidebar.SelectBox`
 - f. `Sidebar.multiselect`

Build Applications with LLMs and AI Feature

- Read Chapter [5 Build Applications with LLMs and AI Feature](#)
 - Try out Google AI Studio (for developer)
 - Apply for a Google api key
 - Get a simple ipynb notebook running with a prompt
 - Consider adding a AI feature in your dashboard
